

NOTE: This checklist requirement applies only to laboratories subject to US regulations. The section director (technical supervisor) must establish the maximum workload limit (based on capability/recorded performance evaluation) for each individual who screens slides (including pathologists who screen slides); this maximum workload limit must conform to applicable federal and state regulations.

Performance must be reassessed using the following:

- *Re-evaluation of 10 percent of the cases interpreted to be negative by cytotechnologists*
- *Comparing the cytotechnologist's interpretation in gynecologic specimens with the final cytologic diagnosis*
- *Comparing, in a manner determined by the laboratory, the cytotechnologist's interpretation in non-gynecologic specimens with the final cytologic diagnosis.*

These are minimal requirements and the laboratory may use additional methods of evaluating performance such as retrospective reviews, comparison of individual statistic with overall lab statistics, and competency assessment.

CYP.08900 Screening Facility Phase II

All cytopathology screening is performed within the laboratory facility or an approved referral laboratory.

NOTE: Cytopathology screening must be performed within the laboratory facility or an approved referral laboratory to provide proper access to technical and professional supervision, pathologist consultation and a controlled working environment. For laboratories subject to US regulations, all cytopathology screening must be performed within a CLIA certified facility or equivalent.

PHYSICAL FACILITIES

Inspector Instructions:

OBSERVE 	<ul style="list-style-type: none"> • Space and utilities are sufficient
--------------------	--

CYP.09000 Adequate Space and Utilities Phase I

Space and utilities (water, electrical) are sufficient for processing cytologic material and for microscopic screening of slides.
